

ABSTRACT

5 A colored, transparent film-forming composition, which
comprises (a) a reaction product of an epoxy group-containing
alkoxysilane (a-1) and an amino group-containing alkoxysilane
10 (a-2) having active hydrogen therein, (b) an acid catalyst, (c) an
alkali-soluble UV absorber, (d) at least one solvent selected from
organic solvents having a boiling point of 100 to 250°C, and (e) a
dye and/or a pigment, has a good coating performance, a good
room temperature curing characteristic and can provide a film
having good film strength and good film removability after use.
The coating method of the composition and the removing method
of the film obtained from the composition are also described.
